LinkedIn | Portfolio | Credly

ABOUT ME

Software Engineer with 6+ years delivering enterprise products across AI integration, cloud platforms, and full-stack development. Bridges the gap between LLMs and traditional business systems, designing custom MCP servers, multi-model orchestration pipelines, and agentic workflows over enterprise ERPs like SAP Business One. 3+ years specializing in Flutter with Clean Architecture and Bloc Pattern, with production apps on Play Store and App Store. Built and shipped 20+ workflow automation systems using Flutter, AppSheet, and Google Apps Script across finance, insurance, manufacturing, and distribution. Google Cloud Certified in cloud architecture and engineering, with 13 skill badges.

TECH STACK & TOOLS

AI & Agents: AI agent architecture (MCP servers, multi-model orchestration, tool-use pipelines), enterprise ERP integration with LLMs, Gemini / Vertex AI, Claude, Groq / LLaMA, Vercel AI SDK, Google OR-Tools (route / constraint optimization), agentic workflow design

Languages: Python, TypeScript, JavaScript, Dart, Java, SQL, HCL (Terraform)

Cloud & IaC: GCP, Cloud Run, Terraform, Cloud Build, Docker, Firebase, Supabase, Vercel, GitHub Actions

Web & Backend: Next.js, React, NestJS, Angular, Spring Boot 3, Node.js / Express, FastAPI, Flask, Starlette / Uvicorn

Mobile: Flutter (Android & iOS), Clean Architecture, Bloc Pattern, Drift SQLite, Offline-first sync

Automation & Enterprise: AppSheet, Apps Script, SAP HANA / SAP B1, SAP B1 Service Layer (OData), Prisma, Cloud SQL, Redis, OAuth 2.0 / JWT

Dev Tools: Git, Bitbucket, Figma, VS Code, Android Studio

PROFESSIONAL EXPERIENCE

2019 -Present (6+ Years) **SOFTWARE ENGINEER | FINETECH CONSULTANCY PVT LTD -SRI LANKA**

Flutter App Development

- Architected & launched Timespot |GPS attendance, task & sub-task tracking, and leave/WFH approval workflows (live on Play & App Store).
- Built Litro Gas SPO Hub & Sales POS (offline-first Drift SQLite sync) and DocIt, an OCR-powered document management system.

AI & Full-Stack Product Development

- Independently built a custom MCP server bridging SAP Business One with Gemini Enterprise |75 read-only tools across 10 domains for autonomous 3-way PO matching, document generation, and natural-language analytics (solo R&D, no native integration exists).
- Built two production SAP B1 finance tools (FastAPI + React): a Google billing reconciliation and invoicing middleware writing back via the SAP Service Layer behind a finance sign-off control, and an executive dashboard reconciling P&L and debtor aging to the cent.
- Researching and building Finetech IDP, an Internal Developer Platform automating GCP customer provisioning via Terraform (Next.js 15, NestJS), with plan-then-approve gates, RBAC, live SSE logs, and single-tenant isolation per customer project.
- Created an AppSheet Workflow Automation pipeline over a reverse-engineered editor API, letting an AI agent generate full enterprise apps in seconds.

Cloud Workflow Automation

- Digitized SAP B1 workflows for clients (Dilmah, DFCC, SANASA) using AppSheet & Apps Script, cutting paper use up to 80%.

Tech Leadership & Collaboration

- Led technical design and cross-team integrations, and mentored developers on architecture best practices and cloud workflows.

EDUCATION

2008 -2016 **ADVANCED LEVEL**

St.Peter's College Colombo 04

2017 -2021 **BSC (HONS) IN INFORMATION TECHNOLOGY -SOFTWARE ENGINEERING**

Sri Lanka Institute of Information Technology (SLIIT)

PROJECT HIGHLIGHTS

SAP B1 MCP Server for Gemini Enterprise -Custom Model Context Protocol server bridging SAP Business One with Gemini Enterprise (solo R&D |no native integration exists). 75 read-only MCP tools across Procurement, Sales, Finance, Inventory, Service, and Metadata domains. Enables autonomous 3-way PO matching, multimodal PR/PV generation from vendor invoice PDFs, dynamic cash flow analysis, and forensic inventory variance detection via natural language. Python, Streamable HTTP, OData, Cloud Run, OAuth 2.0 + PKCE, SAP HANA.

SAP B1 Conversational Agent on Gemini Enterprise -Production Google ADK agent (Gemini 2.5 Pro) that answers natural-language ERP questions over live SAP B1, surfacing 80+ read-only Service Layer tools plus ARIMA and MRR forecasting through the custom MCP server. Served as a portable A2A agent on Vertex AI Agent Engine. Reworked the MCP session manager to survive Cloud Run scale-to-zero (session TTL + invalidation), a self-repairing A2UI toolset, and a deterministic fast path that renders interactive finance canvases from live data with no LLM round trip. Google ADK, A2A, A2UI, MCP, Vertex AI Agent Engine, Vega-Lite, Python. (Production)

Google Billing to SAP B1 Middleware -Reconciliation and invoice-processing middleware for Finetech finance and sales (solo, end to end). Parses Google Workspace, Cloud Platform and Maps billing and reconciles against SAP A/P by matching on amount, not date, to handle monthly, quarterly and annual billing cycles; a second workflow fetches SAP customer and item master to raise A/R and proforma invoices. Writes back via the SAP Service Layer behind a role-gated, finance sign-off control. Python, FastAPI, React 19, TypeScript, Firestore, Cloud Run, Cloud Build. (Production)

Executive Financial & Debtor Dashboard over SAP B1 -Live, read-only executive dashboard (P&L, operating expenses, debtor aging, invoice listings) replacing an error-prone manual workbook. Figures reconcile to SAP's official Profit & Loss and Customer Receivables Aging to the cent via a GL control-account roll-back. FastAPI + React, Google OAuth with per-section RBAC, Firestore, Secret Manager, Cloud Run. (Production)

Finetech IDP -Internal Developer Platform -Self-service portal automating GCP customer environment provisioning. Operators select a customer, product, and runtime; the platform runs Terraform (init, plan, approve, apply) with live SSE log streaming and returns a service URL. Single-tenant isolation per customer GCP project, three-layer Terraform module library, RBAC, audit trail, and BYOC support via Workload Identity Federation. Next.js 15, NestJS, Prisma, PostgreSQL, Terraform, GitHub Actions. (In Progress)

DSI Route Optimizer -AI-powered delivery route planning for 111+ showrooms across Sri Lanka, deployed conversationally in Gemini Enterprise. Solves a single-vehicle open-path TSP with Google OR-Tools (Guided Local Search) in under a second using traffic-aware travel times from the Google Routes API, with results rendered as A2UI Material Design components. Python, Google ADK, Gemini 2.5 Pro, Routes & Places API, Firestore. (POC)

Sela -Trilingual AI Shopping Concierge -Full-screen conversational commerce agent for the Kapruka Agent Challenge 2026, taking a shopper from intent to paid order entirely in chat across English, Sinhala & Tamil with voice and handwriting input. Built on Next.js 16, Vercel AI SDK v6 and MCP, with generative UI and a multi-model fallback brain (Gemini to Groq to Claude).

AppSheet Workflow Automation (Reverse-Engineered Editor API) -Cracked AppSheet's private editor API via a Chrome MV3 extension + Node.js bridge relay, letting an AI agent drive real-time app builds |generating a full enterprise DLP app (36 slices, 35 views, 23 actions, 14 bots) from one idempotent Python script. Fast-forwards workflow delivery ~4× (a ~20-day build now ships in ~5).

DLP Rule Workflow -Commercial Bank of Sri Lanka -Enterprise Data Loss Prevention rule lifecycle management with three approval workflows, 8+ sequential stages, five role-based dashboards, a full audit trail and automated notifications. Generated via the AppSheet Workflow Automation pipeline.

Hive Trendz -AI Social Media Automation -Autonomous news-to-post pipeline using LLaMA 3.3 70B (Groq API), a Flask + APScheduler backend on Railway, and a Flutter app with on-device image compositing and FFmpeg video editing. Posts to Facebook & Instagram fully autonomously.

Flutter Feature Generator -Production-grade Dart CLI that scaffolds a complete full-stack feature (~25 files) in one command: Clean Architecture + BLoC + Drift SQLite + offline-first sync + Java Spring Boot 3 REST backend.

Litro Gas SPO Hub & Sales POS -Combined Flutter app: SPO Hub for dealer visit management; Sales POS for fully offline island-wide gas distribution recording with Drift SQLite background sync (Clean Architecture + BLoC).

Enterprise Dealer Stock Recommendation System -Intelligent stock recommendation for Litro Gas distribution network (Cloud-based Solution)

DocIt DMS -OCR-based Document Search & Workflow with Flutter Clean Architecture (04/2024-Present)

RhythmCore Event System -Full-stack event management & ticketing with QR verification (Freelance Project)

Timespot App -Attendance & Project Management App on Play Store & App Store (09/2023-Present)

Ceylon Explorer -Modular Travel Booking App with Clean Architecture (03/2024-05/2024)

SANASA Life Insurance -SAP HANA Integration & Workflow Automation (06/2023-09/2023)

Dilmah Tea NPD -Product Development Workflow Automation (06/2022-02/2023)

BNS Music OPMS -Organisational Project Management System replacing manual job sheets with a multi-level digital approval workflow (Production to Finance to Director) and budgeted vs actual cost tracking. Built on AppSheet, Apps Script & Cloud SQL.

Sarvodaya Finance -HRIS & Workflow Automation System (Enterprise Solution)
